newsWEB eXpaper

newsWEB eXpaper enables you to integrate articles from newspapers' ePaper editions into your press review.

**From the ePaper directly into the press review**

With a newspaper subscription many publishers offer the access to the daily ePaper editions on their website.

You download the PDFs and easily search them right away - also several sources simultaneously. Full text searching with any terms you choose: names, keywords…

With just one click all relevant articles and pages are highlighted. Like in the print edition, you have a full view of the framework and the original layout.

After taking over the complete newspaper pages into the clipping module *newsCLIP*, the previously marked articles will be wrapped to A4 size in a way that all relevant layout features are maintained. In addition, a miniature version shows the article position on the original page. Finally your press review will be produced with *newsWEB* - as usual in excellent quality – enriched by the articles from the newspapers' ePaper editions.

The benefits at a glance:

- Digital search in the original paper
- Only one search for all newspapers
- … or journals
- Define clear search profiles
- Eliminate duplicate pages (e.g. main edition and regional editions)
- Hits are displayed on the page of the newspaper
- View on framework is maintained
- Article pages are exported in the original layout
- Processing also of following pages
- Import into *newsCLIP* with preset source name and date
- Automatic highlighting of selected article
- Powerful and flexible wrap mechanisms in *newsCLIP*
- Presentation of the source page with marked article outline
- Excellent image and graphics quality
- High-quality full text search
- Copyright procedure legally secured by subsequent licensing
