

newsWEB Capture 6.5 enables you to easily capture and structure digital articles for the further production with the press review editorial module **newsWEB**.

Whether online articles or e-papers, blogs or comments, RSS-feeds, news via e-mails or the own press review – all digital data can be processed via the Windows-intern clipboard (STRG+C). Multimedia content will be processed as article with links to audio and video files.

This tool enables fast structuring (source, date, title, category,...) of the marked article, takeover of formatting attributes, images, tables, screen shots and video stills.

The article elements are assigned to individual fields, standardized source and category information can be selected from a drop-down list, and its URL link is automatically captured. Using the screen-capture-function, the article - as shown on the screen - will be saved as a picture. Video screenshots serve as reference for a multimedia article.

From here, an XML document will be generated which contains the metadata, the full text and images. The final processing of the article takes place in **newsWEB**.

New Features

- Improved image editor
- Improved formatting options
- Hyperlinks can now already be set in *Capture*, i.e. simplified capturing of links and videos
- Format transfer
- Automatic image adoption
- Easy-to-use editor for text formatting
- Browser independency

Technical requirements:

- Compatible with Internet Explorer / Mozilla Firefox / Opera
- ... and all further text containing applications such as Word, Mail, PDF
- Windows 7 (32bit/64bit), Windows 10
