

#### Intranet Pressreview

The standard functions of the *newsWEB* press editorial software also include automatic creation of an intranet website with integrated navigation: the columns guide the reader to the individual articles, which are also kept bundled in themed PDFs and a daily full PDF. The date list gives access to previous editions.

#### Searching the intranet full-text

The recent *newsWEB LookUp* is the perfect extension for those who want to offer their readers a comprehensive web search on the intranet:

- Search in full text
- **field by field**
- \*truncations\*
- for "terms and definitions"

The hit list resulting from the search contains - in addition to the metadata (source, source date, title) - the full text around the sought-after, color-coded term. From there, the article PDF can be accessed.

*newsWEB LookUp* uses Lucene engine for full-text based searches, including Boolean operators, truncation in front and on the end, parenthesis terms and quote search. Indexing of the current data is carried out automatically.

#### Technical requirements:

- Microsoft Internet Information Server ≥ 6.x
- Microsoft.net 4.5
