

newsWEB®

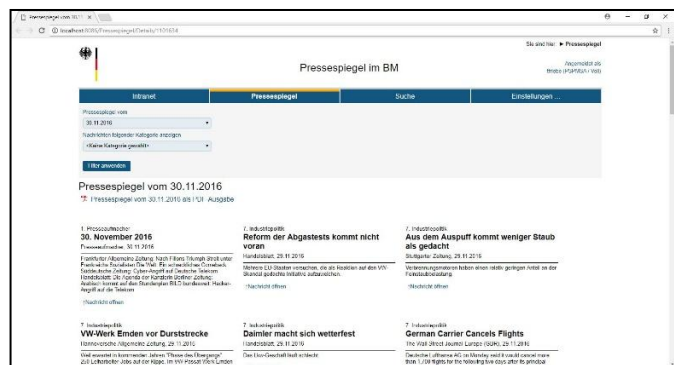

## Portal

**newsWEB Portal** provides access to the article database for any dedicated user and also serves as a digital distribution channel for media monitoring products.

This web-based application allows the delivery of daily press reviews as well as full-text search functions on all articles, regardless of whether these are scans, ePaper, online-content, aggregator-content or videos.

It offers a wide range of sophisticated search-, filtering- and alert-features, enabling users to carry out comprehensive research across the database.

Seamless integration into the **newsWEB** workflow, extensive user management, responsive design and, last but not least, the barrier free concept make this new DataScan product a state-of-the-art environment for every media monitoring service provider.
